Title of project:

Society Management System (SocietyHUB)

Type of Project:

WEBSITE

Developed by:

RAHUL

Society Management System is provided to society members who can get all the updates related to their society. The members also get notified with notices and events held in society and can see information about members in society. Members can also post complaints regarding any issue in society. The only admin has right to modify the database which holds information of members. Also, the admin can perform tasks that are done by the normal members of this system.

Objective of the Project: Objective of Society Management System is

to manage all day to day society works, tasks, and for maintaining information about flats, set up reminders for events, and also to maintain complaint register about society and flats in society.

Description of current system: In the current framework, all the work is done physically. The notice board is traditional. Hence there is problem of unreachable information & more time consuming. No attention to the individual complaints about flat issues.

Limitations of current system: Daily notices, monthly meetings,

cultural events, miscellaneous contacts for daily needs, high priority communication and many others which may not be conveyed properly in current scenario as most of the things are getting handled manually, and this lacks transparency and creates conflicts between members.

Description of Proposed system:
In the proposed system, virtual notice board will be implemented so that notices can be seen from anywhere and will be available to everyone through website. There will be two logins admin and member to ensure the

authenticity of things. This will make the entire process paperless and easy to handle by everyone.

Advantages of Proposed system:

To get attention and notify to important issues and complaints about existing problems (Water, cleanliness, technical works). To maintain transparency between society members and management and to minimize the paperwork load. It also helps to reduce the efforts for manually communicating with each society member for providing notifications and important information. To keep track society members through database

stored. It also helps to manage events, complaints, and to keep society well organized and secure.
